Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 12, drawn to methods of producing glycosylated pilin, classified in class 435, subclass 69.1.
- II. Claims 5-11, 14, 28-29, drawn to methods of eliciting an immune response against a glycosylated pilin, classified in class 424, subclass 184.1.
- III. Claim 13, drawn to a composition, classified in class 530, subclass 350.
- IV. Claims 15-20, drawn to methods of isolating an aminoglycan, classified in class 435, subclass 68.1.
- V. Claims 21-27, drawn to methods of eliciting an immune response against an aminoglycan, classified in class 424, subclass 184.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the glycosylated pilin can be directly isolated from non-recombinant *Pseudomonas* species.

Inventions III and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different

Art Unit: 1645

process of using that product (MPEP § 806.05(h)). In the instant case the composition can be used to elicit an immune response as claimed, or alternatively, may be incorporated into an in vitro assay to detect the presence of antibodies.

Inventions IV and V, drawn to methods of isolating aminoglycans, and eliciting an immune response against an aminoglycan, respectively, are distinct from Groups I-III, since they have a different chemical structure. Furthermore, methods of isolating require different biological reagents and parameters from methods of eliciting an immune response, accordingly each of these groups is distinct from the other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their separate classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
